2. Introduction

Our project aims to solve the major problems of a gym. Our project is divided into to as web and android. An application where the gym owner creates exercise packages and these packages can be monitored by users can look at the information supplements.

User Stories

1- Coach

- a. Story: As a gym trainer, Feridun wants to follow the users in his gym to progress in their training and reach their goals. But with too many users and too few trainers, he was falling short of his ambitions. For this reason, he thought that there should be a gym app for the gym where he works. He talked to Mr. Soner, the owner of the gym where he works out, and asked if they could make an app or a website for him. Mr. Soner reconsidered the necessity of such an application based on similar requests received before. After thinking for a while and analyzing the market, taking into account the lack of trainers and other requirements, Soner Bey decided that a gym application was a must for them. At Feridun's request, the gym app aims to provide a tool to ease the workload of coaches, serve more people and better focus on the individual needs of users.
- b. Scenario: Gym members and the gym owner must have downloaded the app and logged in. Members must have a smartphone (tablet or computer). The trainer takes detailed videos showing all the exercises accurately to the user and gives them to the admin to add to the exercise pool. Then the trainer and admin categorize the movements for each body part. Exercise packages are created. The users choose the package according to their preferences and start doing the exercises in their chosen package on a regular basis.

2- Admin

- a. **Story:** Soner is a university student who also runs a gym. Since his classes have been very busy lately, he could not spare enough time for the gym and the work there was constantly disrupted due to the lack of a trainer. After a meeting with Mr. Feridun, the veteran trainer at the gym, he wanted to start using a gym app where he could manage his work remotely.
- b. **Scenario**: Soner logs into the app from the admin login page and uploads the movement packages and supplement information catalogs created by the coach.
- c. **Requirements:** Soner outlined his requirements to the software teams he interviewed as follows:
 - i. **User Profile :** This includes information such as the user's weight, height, age, body mass index, phone number and e-mail address.
 - **ii. Personel train programs :** Coaches should be able to create specific training programs for users. These programs should match the user's goals and needs.
 - **iii. Video library**: Gym members should have access to a video library to see exercises with correct form and effectiveness.
 - iv. **User login page**: Users should be able to log in with their e-mail addresses and account passwords.
 - **v. User register page:** Users should be able to register with their e-mail address after creating a username and password.
 - vi. **Supplement catalog page:** There will be no supplement sales on the page, but there should be informative articles and catalogs about supplements.
 - vii. **Admin login page**: The owner of the gym should be able to log in to the application as an administrator in the same way as users. It should be

possible to determine whether the person logging in is an admin or a normal user. There is no need to make a separate admin login panel. In this login, details about supplements should be added and removed. In addition, exercise packages should also be created here by the administrator.

3- GYM Member

- a. **Story:** Aykut is a student who moved to Gebze KYK dormitory to study at university and regularly does sports where he comes from. Aykut is a bodybuilding athlete who is eager and focused on his goal. He wants to learn about healthy nutrition and continue his body development here without interruption with efficient exercises. For this, he goes out looking for a gym and comes across Mr. Soner's gym. While talking to the trainer inside, the gym application was mentioned and Aykut liked this project very much. Then Aykut decided to enroll in this gym.
- **b. Scenario:** Aykut's experience of working out using the gym app guides him in achieving his goals and developing healthy living habits. This app makes Aykut's experience at the gym more effective and motivating. Aykut's experience in this gym:
 - i. Login and register: Aykut checks into Mr. Soner's gym and wants to register. The receptionist tells Aykut about the gym app and the registration process. Aykut agrees to use the app and completes the registration process.
 - **ii. Gym application discovery**: Aykut downloads the gym app and starts exploring the content. He is introduced to content such as training programs, exercise videos and healthy eating recommendations.
 - iii. **Meet the coach:** Aykut meets the trainer in the gym and shares his goals. The trainer creates a personalized training program for Aykut and gives it to the admin to add it to the pool section via the app. Then aykut selects the package he wants from the exercise packages and uses it in his program.
 - iv. Healthy nutrition information: Aykut learns healthy eating recommendations and dietary information from the nutrition section within the application. He tries to improve his eating habits with this information.

3.b Process Models

Admin Login and Register

Admin Adding Exercise

Admin Adding Supplement

User Login and Register

User View Supplement

User View Exercises

User / Admin View Profil

| SYSTEM | GYMApp |
|----------|---|
| USE CASE | Register |
| ACTORS | Users, admin |
| DATA | User's email address, user's choosen password, error message |
| STIMULUS | The actor (user or admin) decides to create new account. |
| RESPONSE | System initiates the "Register with Email and Password" use case. System validates the registration information. If the registration is successful, the system displays a confirmation message. If there are errors in the registration information, the system extends to display error messages. |
| COMMENTS | The system differentiates between user and admin during the registration process to capture specific information. Password requirements and email validation are part of the registration process to ensure security. The system may send a verification email to the user for account confirmation. Additional checks, such as checking for duplicate email addresses, should be implemented to maintain data integrity. |

| SYSTEM | GYMApp |
|----------|--|
| USE CASE | Login |
| ACTORS | Users, admin |
| DATA | User's email address, user's choosen password, error message |
| STIMULUS | The actor (user or admin) decides to create new account. |
| RESPONSE | System initiates the " Login with Email and Password" use case. System verifies the login information using the " Verify Login Information" use case. If the login is successful, the system extends to display an error message using the " Display Login Error" use case. If the user forgets the password, the system extends to the " Forgot Password Page." |
| COMMENTS | The system checks the user type (User, Admin) during the login process to provide the relevant user interface. After a certain number of unsuccessful login attempts, the system might implement additional security measures. The " Forgot Password Page" allows users to reset their passwords through a secure process. |

| | Y |
|----------|---|
| SYSTEM | GYMApp |
| USE CASE | View Profile |
| ACTORS | Users, admin |
| DATA | User's profile information (e.g., name, email, account details) Admin's profile information (if applicable) |
| STIMULUS | The actor (User or Admin) initiates the process of viewing a profile by accessing the profile viewing functionality. |
| RESPONSE | The user's profile information is displayed, including name, email, phone number, height, weight and account details. |
| COMMENTS | This use case caters to both regular users and administrators, providing a seamless profile viewing experience. |

| SYSTEM | GYMApp |
|----------|---|
| USE CASE | Edit Profile Information |
| ACTORS | Users, admin |
| DATA | User's current profile information (e.g., name, email, account details). Admin's current profile information (if applicable). Updated profile information (new name, email, etc.). New profile photograph (if applicable) |
| STIMULUS | The actor (User or Admin) initiates the process of editing profile information by accessing the profile editing functionality. |
| RESPONSE | If the data is valid, the system updates the user's or admin's profile information. Response: "Profile information updated successfully!" Response (for "edit profile photograph" extension): "Profile photograph updated successfully!" Response (for "edit personal information" extension): "Personal information updated successfully!" |
| COMMENTS | This use case incorporates two extensions ("edit profile photograph" and "edit personal information") to cater to specific editing scenarios. |

| SYSTEM | GYMApp |
|----------|---|
| USE CASE | See All Exercise |
| ACTORS | Users, admin |
| DATA | List of all available exercises Exercise details (name, description, category, etc.) |
| STIMULUS | The actor (User or Admin) initiates the process of viewing all exercises by accessing the "See All Exercises" functionality. |
| RESPONSE | The system displays detailed information about the selected exercise. |
| COMMENTS | This use case provides a convenient way for both regular users and administrators to explore and learn about the exercises offered by the system. |

| | Υ |
|----------|--|
| SYSTEM | GYMApp |
| USE CASE | See Exercise |
| ACTORS | Users |
| DATA | Exercise details (name, description, category, etc.) |
| STIMULUS | The user initiates the process of viewing a specific exercise by accessing the "See Exercise" functionality. |
| RESPONSE | The system displays detailed information about the selected exercise. |
| COMMENTS | This use case provides users with the ability to explore in-depth details about individual exercises. |

| SYSTEM | GYMApp |
|----------|---|
| USE CASE | See Exercise Package |
| ACTORS | Users, admin |
| DATA | Exercise package details. List of exercises included in the package |
| STIMULUS | The users and admin initiates the process of viewing details about an exercise package by accessing the "See Exercise Package" functionality. |
| RESPONSE | The system displays detailed information about the selected exercise package. |
| COMMENTS | This use case provides users with the ability to explore curated sets of exercises bundled in packages. |

| SYSTEM | GYMApp |
|----------|---|
| USE CASE | See Exercise Package (Admin Version) |
| ACTORS | Admin |
| DATA | Exercise package details. List of exercises included in the package |
| STIMULUS | The admin initiates the process of viewing details about an exercise package by accessing the "See Exercise Package (Admin Version)" functionality. |
| RESPONSE | The system displays detailed information about the selected exercise package and functionality for adding exercise package. |
| COMMENTS | This use case provides administrators with the ability to explore exercise packages and perform additional administrative actions as needed. |

| SYSTEM | GYMApp |
|----------|--|
| USE CASE | Add Exercise Package |
| ACTORS | Admin |
| DATA | Exercise package details (name, description, list of exercises, etc.) |
| STIMULUS | The admin initiates the process of adding a new exercise package by accessing the "Add Exercise Package" functionality. |
| RESPONSE | If the data is valid, the system adds the new exercise package to the system. Response: "Exercise package added successfully!" |
| COMMENTS | This use case involves the process of adding a new exercise package to the system. Administrators can access this functionality to contribute and manage the available exercise packages and empowers administrators to contribute and manage the available exercise packages in the system. |

| | γ |
|----------|--|
| SYSTEM | GYMApp |
| USE CASE | See Supplement Catalog |
| ACTORS | Users |
| DATA | List of available supplement catalog. Supplement details (name, description, usage, etc.) |
| STIMULUS | The user initiates the process of viewing the supplement catalog by accessing the "See Supplement Catalog" functionality. |
| RESPONSE | The user may choose to click on a specific supplement to view more detailed information. Response: The system displays detailed information about the selected supplement. |
| COMMENTS | This use case provides users with the ability to explore and learn about different supplements offered by the system. |

| SYSTEM | GYMApp |
|----------|--|
| USE CASE | Supplement Details |
| ACTORS | Users, admin |
| DATA | Supplement details (name, description, usage, etc.) |
| STIMULUS | The user initiates the process of viewing detailed information about a specific supplement. |
| RESPONSE | The system, in response to the "See Supplement Catalog" use case, prompts the user with an option to view detailed information about a specific supplement. The user selects a particular supplement from the catalog. The system retrieves and displays detailed information about the selected supplement, including its name, description, recommended usage, and other relevant details. |
| COMMENTS | This extension enhances the user experience by allowing them to explore in-depth details about individual supplements. |

| SYSTEM | GYMApp |
|----------|--|
| USE CASE | See Supplement Catalog (Admin Version) |
| ACTORS | Admin |
| DATA | List of available supplement package. Supplement details (name, description, usage, etc.) |
| STIMULUS | The admin initiates the process of viewing the supplement catalog by accessing the "See Supplement Catalog (Admin Version)" functionality. |
| RESPONSE | The admin may choose to click on a specific supplement to view more detailed information or perform additional administrative actions. Response: The system displays detailed information about the selected supplement. |
| COMMENTS | This use case, provides administrators with the ability to explore supplements and perform additional administrative actions as needed and an extension of the "See Supplement Catalog" use case, involves the process of viewing a catalog of available supplements with additional administrative functionalities. Administrators can access this functionality to explore supplements and perform administrative actions. |

| SYSTEM | GYMApp |
|----------|--|
| USE CASE | Add Supplement Information |
| ACTORS | Admin |
| DATA | Supplement details (name, description, usage, etc.) |
| STIMULUS | The admin initiates the process of adding new supplement information by accessing the "Add Supplement Information" functionality. |
| RESPONSE | If the data is valid, the system adds the new supplement information to the system. Response: "Supplement information added successfully!" |
| COMMENTS | This use case empowers administrators to contribute and manage information about available supplements in the system and involves the process of adding new supplement information to the system. Administrators can access this functionality to contribute and manage information about available supplements. |
